

MiniBull Location of the Price and Volume (cTrader Indicator)

See where price stands across every timeframe — one panel, live levels, no chart-switching.

MiniBull Location of the Price (LOP) shows exactly where price sits vs the last closed bar across every timeframe that matters: Monthly, Weekly, Daily, H8, H4, H1, M30, M15, M5, M1 (configurable; five active by default).

For each timeframe: previous close, absolute and % change, a Bull/Bear trend read from a dual AMA (9/200) crossover, and a tick-volume ratio vs its own average, in one on-chart dashboard toggled with a click.

Persistent, color-coded lines (green = support, red = resistance) mark every level on the chart and update live, so you always know where price stands without opening a sub-window.

Breakout alerts (sound + popup) fire when price clears a prior high or low, optionally requiring volume confirmation, filtering out thin, low-conviction fakeouts.

A compact trend summary at the chart's bottom gives a one-line market-mood read across every tracked timeframe, active or not. Built for traders who think across timeframes: spot alignment, spot divergence, never lose track of price vs yesterday, last week, or last month.
