

MiniBull Observer (cTrader Indicator)

A multi-timeframe market bias dashboard — 9 indicators, 11 timeframes, one score.

MiniBull Observer is a multi-timeframe market bias dashboard for cTrader, blending Moving Averages, RSI, MACD, Stochastic, CCI, and Momentum into one composite score across 11 timeframes. See instantly whether the market is aligned bullish, bearish, or mixed, with color-coded per-timeframe signals and an overall alignment summary.

The built-in Trade Calculator estimates SL/TP and risk/reward using Wilder's ATR, covering both breakout scenarios around the previous daily high/low and standard ATR-based entries. A Price Level Analysis module tracks all-time highs/lows, level tests, and breakout bias over a configurable lookback.

Choose SMA, EMA, or KAMA for the core moving average, toggle MA lines and signals on the chart, and customize colors, fonts, and panel position. Optional D1 level alerts with sound notifications keep you informed of key breakouts and approaches.

Lightweight and self-contained, requiring no file or network access, so it runs cleanly on both desktop and cloud-hosted cTrader instances.

Pricing

Buy outright: **None USD**

1 Month: **49 USD**

6 Months: **109 USD**

1 Year: **179 USD**
