

MiniBull Sniper Pro (cTrader Indicator)

Precision trend-following indicator — AMA200/AMA9 with Slope Confirm.

MiniBull Sniper Pro is a precision trend-following indicator built around two Kaufman Adaptive Moving Averages (AMA200 and AMA9). It signals BUY when price closes above both AMAs, SELL when it closes below both, and stays neutral in between, filtering out noise in choppy markets.

An optional Slope Confirm filter requires the AMAs to be trending in the signal's direction before an arrow is drawn, cutting down false signals in flat conditions. Auto-detect mode switches between Swing settings (Daily and above) and Scalp settings (below Daily) based on your chart's timeframe, or configure each mode manually with independent slope lookback and minimum slope thresholds.

Signals are computed strictly from closed-bar data with a no-repaint design, so historical arrows never move once drawn. A live info panel shows the current mode, signal, and AMA values, with optional sound alerts on new signals.

Fully self-contained, requiring no file or network access, so it runs cleanly on desktop, VPS, and cloud-hosted cTrader instances.
