

Minibull Gold vs Indices — Shift Ratio Edge EA

The Shift Ratio Edge divergence logic, fully automated — from entry to exit.

Minibull Gold vs Indices — Shift Ratio Edge EA turns the Shift Ratio Edge divergence logic into a fully automated trading system. It detects temporary divergences between Gold (XAUUSD) and US equity indices (NAS100, US500, US30), and manages the resulting trades on its own from entry to exit.

Key Features

- Works on any symbol and any timeframe (auto-detects Gold / NDX / SPX / US30 symbols, or set manually)
- Configurable Moving Average type, period and price source for signal generation
- ATR-based Safety Stop Loss (Wilder ATR) for consistent risk management across volatility regimes
- Take Profit, trailing stop and break-even — all defined as ATR multiples
- Optional maximum holding time (in completed daily bars)
- Optional auto-attached BullBOP19 sub-window indicator for visual confirmation on the chart
- On-chart info panel with configurable position
- Option to automatically close open positions when the EA is removed from the chart

Strategy Tester Results

Symbol: US30 | Timeframe: H1 | Period: 2024.01.01 to 2026.06.15 | Initial Deposit: \$50,000 | Leverage: 1:200 | Modelling: Every tick based on real ticks
