

Minibull AMA Sniper — No-Repaint Signal Indicator

Trend-positioning signals with a slope-confirm filter — no repainting, ever.

Minibull AMA Sniper is a trend-positioning indicator built around two Kaufman Adaptive Moving Averages — AMA200 and AMA9 — combined with a unique Slope Confirm filter that stops you from trading a flat, indecisive market.

How it works

The indicator tracks where price sits relative to both AMAs:

- BUY when price closes above both AMA200 and AMA9
- SELL when price closes below both AMA200 and AMA9
- NEUTRAL when price is trapped between the two averages

Price position alone is not enough. The Slope Confirm filter checks that the AMA itself is actually sloping in the signal's direction — a sideways AMA cancels the signal back to Neutral, filtering out weak, whipsaw-prone setups.

Auto Swing / Scalp mode

The indicator automatically adapts its slope-filter sensitivity to the timeframe you're trading: Swing settings (looser, longer lookback) on Daily and above, Scalp settings (stricter, shorter lookback, higher slope threshold) on anything below Daily. You can also force either mode manually.

Key features

- 100% non-repainting: every historical BUY/SELL arrow is calculated from a strictly backward-looking, causal formula and is stored per-bar — it never changes on recalculation
- AMA200 + AMA9 adaptive moving average lines plotted directly on the chart
- Slope Confirm filter with independent Swing/Scalp settings (lookback bars, minimum slope threshold, which AMA(s) must confirm)
- Clean, redesigned on-chart info panel showing: current mode, live signal, AMA200/AMA9 values, slope filter status
- Previous Day (D1) reference block: yesterday's closed daily candle close, and the live price's distance from it in both price units and percent
- Wilder ATR(14) calculated on closed D1 bars — a quick read on the instrument's daily volatility

- Optional native Alert() notification the moment a new confirmed signal appears
- Works on any symbol and any timeframe — indices, FX, metals, crypto CFDs

Who it's for

Traders who want a clear, objective trend-and-momentum read without repainting surprises — whether you trade discretionarily off the signal or use it as a filter inside your own system.

This is a signal/visual indicator. It does not open, close, or manage trades. Past performance of any indicator or strategy is not a guarantee of future results.
